

Radioiodine Therapy for Feline Hyperthyroidism

Why choose Hypurrcat?

MISSION	Our mission is to provide cats, owners, and their veterinarians with the best radioiodine facility ever. Hypurrcat is dedicated <u>solely</u> to treating hyperthyroid cats with radioiodine. By specializing, we have honed this treatment down to a science.
EXPERIENCE	Dr. Mark Peterson is recognized as both a pioneer and an expert on feline hyperthyroidism. He has authored over 175 scientific articles on the diagnosis and treatment of hyperthyroidism in cats. Dr. Peterson was the first veterinarian to use radioiodine treatment for hyperthyroid cats, and he has personally treated over 10,000 cats during his 30-plus year career.
TREATMENT SCHEDULE	We treat every week to ensure that your cat receives the prompt, effective therapy that he or she deserves.
THYROID IMAGING	Thyroid scintigraphy is considered the “gold standard” in diagnosing mild hyperthyroidism in cats. We routinely perform thyroid imaging to accurately confirm the diagnosis of any cat that needs it.
DOSIMETRY	At Hypurrcat, we personally tailor each I-131 dose based on a number of patient-specific factors. This individualized dosing method not only results in a >98% cure rate, but also greatly decreases the incidence of permanent hypothyroidism after therapy.
THYROID CARCINOMA	We use thyroid scintigraphy to correctly diagnose cats with malignant thyroid carcinoma. This allows us to calculate and administer the ultra-high doses of radioiodine needed to destroy the thyroid cancer.
PERSONAL CARE	Dr. Peterson examines, treats, and evaluates all cats during their stay. Your cat’s caretaker feeds, monitors, and brushes your cat throughout the day, then calls or emails the owner with a daily update.
ACCOMMODATIONS	Dr. Peterson customized spacious cat cottages with hiding boxes, perches, litter box alcoves, and individualized ventilation systems to ensure that all cats get the pampered experience they deserve.
ENVIRONMENTAL ENRICHMENT	At Hypurrcat, our hyperthyroid patients are housed in a large, quiet ward with their own flat-screen TV that plays relaxing nature videos. We also provide the cats with live entertainment. At our Westchester facility, the cats can watch gerbils scurry through habitrails and run on exercise wheels. At our NYC facility, the cats have a window view of the back courtyard, where they can observe birds and squirrels eating from feeders.
WEB CAM	Live web cams in each of the cat condos allow both cat owners and referring veterinarians to watch their cats during their stay with us (even on a smartphone!).
FOLLOW-UP CARE	Dr. Mark Peterson is available to consult with both cat owners and referring veterinarians, both during the cat’s hospitalization as well as <u>anytime</u> after the cat has been discharged.
